

SURAJ SHAHI

Software Developer | Frontend & Full-Stack

CONTACT

- +358449522869
- surajshahi331@gmail.com
- Helsinki, Finland
- github.com/suraj-irukaht

CORE SKILLS

Web Development

- JavaScript, TypeScript
- React.js (component-driven UI)
- HTML, CSS, Tailwind
- REST APIs & HTTP
- (Learning) Node.js & Express

Full-Stack Foundations

- Backend learning: API routes, server logic
- Databases (beginner – MongoDB)
- State management & data flows
- Version control with Git / GitHub

Developer Mindset

- Willingness to learn and grow
- Clean, maintainable code habits
- Debugging & problem solving
- Comfortable with feedback and iteration

WORKING STYLE

- Curious and motivated learner
- Enjoys pairing and mentorship
- Comfortable not having all the answers
- Open to feedback and iteration
- Wants to understand why, not just how

INTEREST AREAS

- Cybersecurity & phishing awareness
- Full-stack development
- Scalable systems & cloud basics
- Product thinking & user value
- Prototyping and continuous improvement

EDUCATION

Full Stack Software Development (Master's)
JAMK University of Applied Science
Finland | 2025 – Present

Relevant focus areas:

- Software development foundations
- Innovations & backend principles

PROFILE

Early-career software developer with a strong interest in building purposeful products and growing into full-stack development. My current strengths are in frontend development using React and TypeScript, and I am actively learning backend technologies including Node.js, API development, and databases.

I enjoy working in collaborative teams, understanding how software is built end-to-end, and learning from experienced developers. I'm motivated by real-world challenges and excited about contributing to cybersecurity products while developing my technical skills.

WORK EXPERIENCE

Front-End Developer

Rapid Web Solutions | 2021–2025

- Developed and maintained production software applications using JavaScript, React, and TypeScript
- Worked in Linux-based development environments with Git-based workflows
- Assisted in debugging, issue fixing, and improving existing codebases
- Collaborated closely with developers, designers, and stakeholders
- Followed Agile practices and participated in reviews and testing activities
- Built strong habits in code quality, documentation, and responsibility
- Worked on a WordPress and Webflow-based project

PROJECTS & LEARNING

- Built early-stage prototypes and experimental features using React and TypeScript
- Created small Python-based services and scripts to support experiments
- Explored data-driven features and simple pipelines in academic projects
- Worked in Linux environments for development, testing, and debugging
- Learned new technologies independently by reading documentation, testing ideas, and iterating fast
- Used modern tools (including AI-assisted development tools) to accelerate experimentation while understanding the underlying code

SJ Flix – Movie Browser (React)

<https://sjflix.netlify.app>

- Built UI for browsing movies and learning API requests
- Practiced React component structure, props, and state

SaaS Landing Page – UI Concept (React + Tailwind)

<https://light-saas-landing-page.netlify.app>

- Designed and implemented responsive components
- Focused on UI architecture and mobile-first layouts

Backend & Full-Stack Learning

- Experimenting with Node.js, Express API routes
- Exploring MongoDB and data persistence
- Practicing authentication basics
- Developing small personal projects to grow toward full-stack
